

Stepper Motor with GPL 22 – 80 Planet Gear

Stepper Motors with GPL 22 – 80 Planet Gear

- Stepper motor mounted gear
- Powerful 200 steps/rev. stepper motors
- 1 to 3 stage gears in different versions:
 - Standard version with gear backlash 20 to 50 angular minutes
 - Low backlash version with gear backlash 6 to 15', available for size 32 to 80
- For 0.1 to 38 Nm maximum permanent torques
- 100% permissible short-term overload
- Particularly adapted for permanent, alternate or intermittent operation
- Ideal for combination with toothed belt modules
- 4:1 to 256:1 reduction ratios depending on the gear type
- High efficiency
- Low gear inertia
- Standard gears:
 - GPL 22: IP 44 protection
 - GPL 32 to 80: IP 54, special version with IP 65 protection
- Options:
 - Incremental encoder for size 25 or over
 - Permanent magnet motor brake for size 52 or over
 - Incremental encoder and brake for size 52 or over
 - Stepper motor with mounted heat sink

Operating Principle

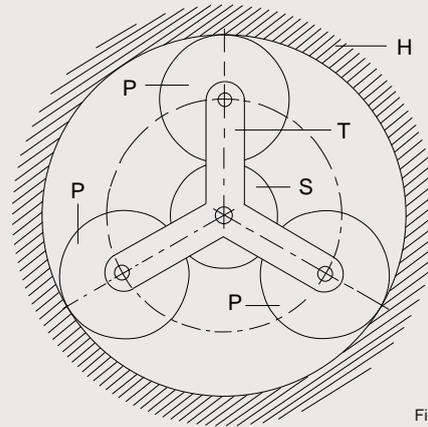

Fig. 1

The low-backlash GPL planet gear is of modular design with one, two or three consecutive stages.

For each stage, the drive input is effected via the sun wheel (S) and the output via the planet carrier (T).

The input power is distributed by the sun wheel to the planet wheels (P) and then transmitted to the output by means of the planet carrier.

The gear housing (H) performs as a ring gear and transmits the torque.

When is the Use of a Gear Required?

- To reduce the mass inertia and increase the output torque.
- Whenever a very low speed is required at the output.
- To increase the system's resolution.

How to Determine the Adapted Reduction Ratio:

To obtain good dynamic behavior, the reduction ratio must be determined accurately, particularly in the case of stepper motor drives.

The reduced external mass inertia ($J_{ext\ red}$) should not exceed 5 to 20 times the rotor mass inertia. In the case of high dynamic systems :

$$J_{ext\ red} < J_{Rotor}$$

The adapted reduction ratio can be obtained by the following formula:

$$i = \sqrt{\frac{J_{ext}}{J_{ext\ red}}}$$

Possible Combinations

Protection Mode of the Overall Unit	Size (Gear)	Possible Combinations			
		Stepper Motor with Gear ¹⁾	Stepper Motor with Gear and Encoder	Stepper Motor with Gear and Motor Brake	Stepper Motor with Gear, Encoder and Motor Brake
	22	IP 40 IP 44		IP xx = Standard IP xx = Special version (modified dimensions)	
	32	IP 40 IP 44	IP 20 IP 44		
	42	IP 43 IP 44 IP 65	IP 20 IP 44 IP 65		
	52	IP 43 IP 44 IP 65 ²⁾	IP 20 IP 44 IP 65	IP 00	
	80	IP 54 IP 65	IP 54 IP 65	IP 54 IP 65	IP 54 IP 65

-30 bis +90 °C

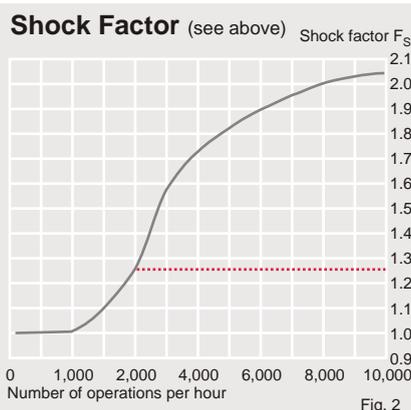

1) For technical data please refer to the motor data sheets

2) Valid for S1 operation mode (continuous operation). The gearbox's operating time exceeds 15 minutes without a break or the duty cycle is greater than 60%.

In no case the gearbox housing temperature may exceed 70 °C.

3) Valid for S5 operation mode (cyclical operation). The gearbox's duty cycle is less than 60%. The number of operations per hour can range anywhere from a few to several thousand.

If the number of operations exceeds 1000 per hour, the maximum torque occurring has to be multiplied by a shock factor (see fig. 2) to take into account the additional dynamic load.

Material

Gear housing:
 GPL 22: stainless steel
 GPL 32 – 80: rustproof for normal environmental conditions

Output shaft bearing: 2 deep groove ball bearings

Grease Lubrication

Maintenance-free permanent lubrication with grease of the very highest quality (Lubcon Turmgrease N 502). The gear boxes are delivered with the cavities filled about 30% with grease. After three years or every 10,000 hours of operation we recommend servicing.
